

Cloud Readiness Assessment

How do you prepare an application for the cloud?

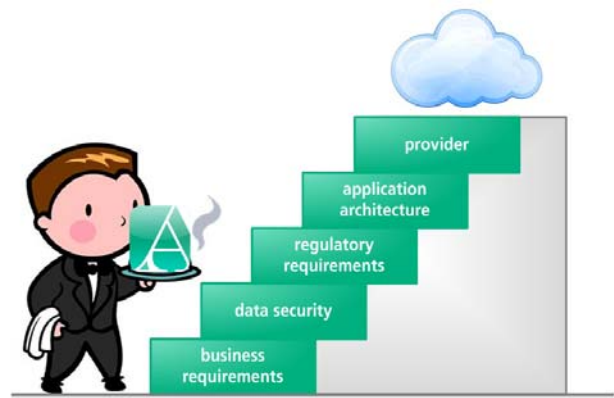

Everyone is talking about the cloud nowadays. Cloud providers promise low costs for application development and operation. Companies do not need to provide and maintain their own infrastructure anymore. Another interesting aspect is scalability. To make an application available in the cloud is easy. However, is the cloud really the better solution for your application? And if so, what do you have to do to make your application available in the cloud?

Your situation

Your company has decided to make an application available in the cloud. In order to find out which changes to the application are necessary, first, the following questions have to be answered:

- How secure are my data in the adopted solution?
- Which business requirements can be covered by this?
- What does the architecture of my application look like? Is the application cloud-enabled?
- What dependencies to other applications exist?
- Is special training needed in order to run the application in the cloud?
- Which operational aspects are involved?

- What measures are needed to guarantee a reliable operation?

Our Service

In workshops, business, security and regulatory requirements are analyzed in order to obtain a comprehensive picture. We will examine whether the application meets the requirements for cloud computing and what changes would eventually be necessary to cloud-enable the application. Based on the results, we then prepare recommendations for further steps or possible measures to be taken.

Your advantage

This assessment will provide you with an independent and understandable assessment of the cloud readiness of your application, enabling you to make an informed decision whether it is worth to make an application available in the cloud.

AdNovum has designed, implemented, and maintained demanding software solutions for both the private and the public sector for 25 years. AdNovum has been active in the field of IT security for 25 years and draws on experience with a broad customer base across various industries.
